R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
print("hello world!")
```

```
## hello world!
```

```
from math import pi
```

```
pi
```

```
## 3.141592653589793
```

Including Plots

You can also embed plots, for example:

```
## [1] 3.141593
```

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
